The REAL TIME Strategy Suite 3 PLUS
Real Time Education, MarketScans *and more!* See details on pages 6-7.

INSIDE

- 3 Find Great Real Time Trades
- 4 Maximize Gains Every Day
- 6 The REAL TIME POWER Package
- 8 MarketScans - Real Time Scanner
- 10 PLUS Real Time Trading Courses

Trading in Real Time Just Got a Lot More Profitable with RT Strategy Suite 3!

Ed Downs
CEO and Founder
Nirvana Systems, Inc.

The Real Time Strategy Suite is one of our most popular trading packages, and now it's better than ever! But before I talk about the Strategies, I'd like to say a few words about trading in Real Time because it has some great advantages.

First is the leverage. Most brokers will give you 4 times your account equity to trade with during the session. You can also control risk better. If you close your trades by the end of the session, you have no overnight risk.

Contrary to popular belief, you don't have to be glued to a machine 6 hours a day to make good money trading the markets. You can trade whenever you want and still do very well—provided you use the right tools for the time of day you are engaging the market.

Our Real Time Strategy Suite (RTSS) was developed by Jeff Drake, who recognized that the BEST way to approach the Real Time Markets is to have a game plan that adjusts to the time of the trading day.

From this insight, he developed the initial Real Time Strategy Suite, but with the improvements in RTSS 3 we now have a package that really is "The Whole Enchilada" (as we say in Texas).

The new Real Time Strategy Suite 3 is the most logical approach to trading I've ever seen. It's based on the fact that certain Strategies work well at different times of the day. See pages 4-5 for a clear description of this intuitive process.

All stocks move some each day, but some move a lot more than others, and it is those stocks you want to be trading. But how do you find them? And how do you find the setups that are most conducive to a move given the current mode of the market?

We have the answer! RTSS 3 now includes MarketScans—a product that uses our servers to find virtually ANY condition across the entire market—even on 1 Minute Bars.

MarketScans teams up with OmniTrader (or VisualTrader) to provide an incredibly powerful Market Trading Machine. I've never seen anything like it. You can instantly find the stocks with the right setups and then let either platform fire the Signals. MarketScans and RTSS 3 work so well together, we call them the Real Time Power Package!

And, to make it even easier to engage the market with these products, Jeff has created two great courses, Real Time Profits with RTSS 3 and Finding Great Setups with MarketScans, in which he will show you how to use RTSS 3 and MarketScans to find great trades every day!

Using RTSS 3 and MarketScans, folks who have never tried to engage the market before can now easily do so. Plus, we're providing a free one month subscription to our Real Time data to get you going.

And if you're already trading in Real Time, you'll be amazed at the quality of the setups provided by MarketScans, and how quickly OmniTrader will fire timely Signals on resulting candidates.

Now, with the the RTSS 3, making money during the session has never been easier—or more fun! But don't take my word for it—give the package a try. It's backed by our Money Back Guarantee.

Get ready to trade the Real Time Markets in a way that you never dreamed possible—until now.

Sincerely,

Ed Downs
CEO and Founder
Nirvana Systems, Inc.

Find and Trade Opportunities Like These Every Day!

Every day, the Real Time Markets offer incredible opportunities for profit. The problem is finding them.

OmniTrader is built to help you find Trading Signals that you can quickly confirm using any of a number of methods; including patterns, volume, and market direction. And when you see a really good Signal, entering and managing the trade is easy thanks to OmniTrader's many automation and trading features.

Now, with the the Real Time Strategy Suite 3, making money during the session has never been easier—or more fun!

Thanks to advanced Range and Gap analysis, the Real Time Strategy Suite 3 can identify key Reversals and Breakouts like the ones you see on this page. It's uncanny how well these Signals identify explosive moves.

There are essentially 3 Strategy Types in the Suite—Reversal, Breakout, and Gap Strategies. This collection is a combination of Strategies that provides total session coverage because some of the Strategies work well in the morning, others in the afternoon.

When you add MarketScans to identify the symbols that are in play, it's *almost like being immersed in a Real Time Shooting Gallery*.

As shown here with three great recent trades on Intel; The Real Time Strategy Suite 3 uses different strategies at different times of the trading session.

The RT Range 3 Strategy employs multiple stops in order to maximize profits on every trade.

Maximize Gains All Day, Every Day...

One thing traders frequently encounter when making the switch to Real Time is that markets behave differently at different times of the day:

The Open: The Open starts with high volume and intense volatility as traders process all the information that came into the market in the overnight session.

The Morning: The open volatility generally gives way to the morning markets which are active and characterized by frequent reversals. This continues to the lunch lull where volume and volatility typically dry up.

The Afternoon: As the traders come back from lunch, the market is ripe for potential breakouts, as everyone wants to make sure they're on the right side of the market going into the close.

The “Whole Enchilada”

All these different behaviors make it difficult to find one trading system that can profitably trade throughout the market day.

The Real Time Strategy Suite 3 addresses this by including five powerful trading Strategies that each focus on a specific segment of the trading day, giving you the best trades at all times. The included Strategies are:

- RT Gap
- RT Pivot
- RT Snapback
- RT Range
- RT Breakaway
- NEW! RT Inside Range
- NEW! RT Gap Fill

The best thing about these Strategies is how they work together to give you plenty of prime trades throughout the trading day.

*Over Bought(Sold) Reversals and Range Breakouts.
Real Time Strategy Suite finds ‘em.’*

with the REAL TIME Strategy Suite 3

5 Improved Strategies

RT Gap 3

The RT Gap Strategy trades on days that the open has a move away from the prior Close. It takes advantage of the strong moves that usually occur as price moves back into the gap.

RT Pivot 3

The RT Pivot Strategy emerged from work on trading Gaps, but doesn't actually rely on a gap condition in the chart. This Strategy starts trading 15 minutes after the open, profiting from the volatile early morning reversals.

RT Snapback 3

The RT Snapback Strategy looks for extreme overbought (or oversold) conditions that lead to the sharp V-Reversals starting 30 minutes after the session open.

RT Range 3

The range of prices defined by the first hour of trading informs traders of what to watch for in the day ahead. The RT Range Strategy monitors these levels for potential breakouts that can lead to lucrative extended intra-day moves.

RT Breakaway 3

RT Breakaway only trades in the afternoon hours of the session, which tend to be quiet ahead of the big moves. This Strategy looks for tight ranges that form and pounces on the breakout opportunities that arise as the professionals begin buying or selling ahead of the Close.

Each strategy has been revisited by our development team and improved for better real time trades than ever before!

*"Timing isn't everything.
It's the ONLY thing."*

PLUS: Two Powerful NEW Strategies in RTSS 3!

Not only did we improve all five of the original RTSS strategies, we also have included two new strategies for even more profits!

RT Inside Range 3

The RT Range 3 Strategy looks for breakouts from the opening range. But many times, stocks will continue to trade within that range. The RT Inside Range Strategy will look to play the reversals off the range levels for consistent profits as the day progresses.

RT Gap Fill 3

When a stock gaps at the open, it will often revert back to the closing price of the previous day. This is known as a gap fill, and it can lead to big, quick profits. The RT Gap Fill Strategy takes advantage of this common occurrence by taking profits once the gap is filled.

The **REAL TIME** **POWER Package!**

The REAL TIME POWER Package includes the 3 Key Ingredients for Your Trading Success

1. Powerful Signals

A Revolutionary Trading Approach for Any Time of the Trading Day

When we set out to create the Real Time Strategy Suite, we wanted to empower our customers so they could engage the market all day with the most powerful techniques available.

Almost like a Symphony, the market goes through defined movements each day. The Real Time Strategy Suite recognizes this movement and fires Signals at just the right time. This chart on SPY (SPDR S&P 500) illustrates the four primary movements: Opening Bell, Early Volatility, Opening Range Breaks, and Afternoon Trends. Each Strategy in the Real Time Strategy Suite looks for specific conditions within these trading zones to fire Signals.

You don't have to worry about WHEN to trade the different Signals because the timing is built into the Strategies. You simply turn them on, wait for the Signals, and confirm them with the techniques Jeff teaches in his courses (see page 10).

The ONLY Real Time Strategies that are Time Sensitive

At the Opening Bell, the RT Gap Strategies detect the highest probability counter-gap moves. As the market begins its early trends, the Pivot Strategy identifies clear "Higher Lows" for Long Entries while RT Snapback finds the best reversal trades. Later in the session, the RT Range Strategy finds Opening Range Breakouts. And Breakaway Moves come as the afternoon Trend gets underway.

The Strategies and Education alone can make anyone a competent trader on a standard list like the S&P 100. But, when you add MarketScans, a whole new world of possibilities opens up. As Jeff will show you in his course, it takes a few seconds to bring the best candidates into OmniTrader.

Everything You Need to Beat the Market All Day, Every Day!

2. MarketScans

See p. 8

Instantly identify ALL Symbols generating Setups in the current market & pull them into OmniTrader and Visual Trader for action!

3. Great Education

See p. 10

The Real Time Power Package includes two information-packed seminars: *Real Time Profits with RTSS 3* and *Finding the Best Setups with MarketScans*. These seminars are based on thousands of hours of market study.

If you've ever wanted to make money trading in Real Time, you now have the Platform, the Strategies, the Market Scanner AND the Education to make your dreams a reality.

In these courses, Jeff demonstrates the power of RTSS and MarketScans and shows how well they work in concert.

the Most Powerful

Scan the Market Intraday in 1, 5, 15, 30, or 60 Minute Time Frames!

Imagine being able to scan for any condition in the current market or pre-market; including gaps, range formations, unusual volume, and any other condition to find the **PERFECT** Setups.

That's MarketScans! MarketScans takes off where most Real Time Scanning products just get started.

Easy to Use

MarketScans is based on OmniScan End-of-Day, so if you have used that tool to identify lists of symbols for OmniTrader, you already know how to use it.

We provide "canned scans" so you can use MarketScans right away without creating your own conditions. But it's easy to configure new Scans, thanks to the integrated Formula Builder, shown to the right.

Once you are set up, MarketScans will identify specific conditions across all 10,000+ Stocks and ETFs, delivering the candidates to you the instant they are identified. There are even alerts to tell you when a new Scan Symbol comes in!

Instant Charts

Charts! When a given Scan Condition is met, a Chart is generated and added to the page. This saves time because you only investigate candidates with a great setup based on the chart.

Canned scans are provided and defining custom scans is easy.

Charts are maintained in Scan Pages that you can easily click through at the top of MarketScans. Then, when you see a hot candidate, just double-click it and it will instantly appear inside OmniTrader or VisualTrader.

The Perfect Trading Partner

The best trading opportunities have Set-ups. For example, Gaps of a certain size that appear after a certain kind of move

indicate a follow-through move is likely imminent.

MarketScans finds the conditions you are watching for and lets you add them to OmniTrader so it can generate Signals on them. This process makes trading in Real Time easy and fun!

And you can run multiple scans at the same time—enabling you to further extend your trading power.

Market Scanning Tool Ever Invented!

Scan Name (multiple scans can run at the same time!)

Scan Symbols can be automatically added to OmniTrader or VisualTrader.

Scan Pages

Thumbnails of Charts come up as the given scan conditions are met, and saved as "Pages" for easy access.

MarketScans also has a “compact” view, so you can set it on the side of your monitor while you wait for candidates to appear.

MarketScans is included with the *REAL TIME POWER* Package FREE!

Anyone engaging the market in Real Time will trade better with MarketScans. Experience the power of MarketScans yourself and discover the difference it can make in your trading. Market Scans is Free with the package including one Free month of Real Time data.

PLUS ***REAL TIME Trading Education***

Two Trade Master Courses

Real Time Profits with RTSS 3

The power of RTSS 3 is revealed in Real Time Profits with RTSS 3. In this course by Jeff Drake, you will learn how to take advantage of these situations at the open AND through the entire trading day. We start by looking at the market dynamics at the open. When a stock opens with a significant gap, the resulting price activity in the intra-day session provides multiple trading opportunities.

We then turn our attention to the volatility after the open, the lunch time lull, and the remaining session into the close. Each market stage has a different personality, and Jeff shows you how the market changes throughout the trading day and the type of trade we should be looking for in each stage.

The course continues as Jeff discloses Nirvana Systems' extensive research into which strategies are conducive to each of the different stages of the market day. This research was developed based on recent market dynamics, and goes well beyond what is available elsewhere. It is the most up-to-date look at how stocks move at different times of the trading day, and how YOU can profit from that knowledge.

BONUS! Finding the Best Setups with MarketScans

The Real Time Power Pack also includes Finding the Best Setups with MarketScans. In this presentation, Jeff Drake will show you how easy it is to find the stocks that are poised to move, and how to have them added to your trading list in OmniTrader (and VisualTrader) *automatically!*

These two courses will help you harness the profit potential of The Real Time Power Package, and they are included FREE with your purchase!

COURSE HIGHLIGHTS

Real Time Profits with RTSS 3:

- Capturing Big Profits with Opening Gaps
- Playing the Opening Range Reversals and Breakouts
- How to Stay In-Sync with the Broad Market
- Confirming the Best Signals from Each Strategy
- When to Engage the Afternoon Market

Finding the Best Setups with MarketScans:

- Understanding the Power of Market Scans
- Personalizing Your MarketScan Interface
- Which Scans Give You the Best Real Time Setups
- Automatically Updating Your Focus List with Market Scans

Everything You Need to Master the Market in Real Time IN ONE INCREDIBLE OFFER

Experience the Incredibly Profitable World of Trading in Real Time. Whether you are a veteran Day Trader or someone who wants to get started, our Real Time Power Package can help you be more successful than you ever dreamed possible. We've bundled everything together to create an incredibly low price for all the components—AND it's all 100% Money Back Guaranteed!
