OmniTrader 2014

A Powerful New *OmniTrader*

We are pleased to bring the firepower of the 20th Anniversary Version of OmniTrader to our loyal customers. This new software is all about finding and confirming the best trades the market has to offer. It's also about providing information that will help you trade the markets faster and more reliably than you ever imagined. Let's explore it now...

Powerful New Charts

Heikin-Ashi charts use a brilliant calculation that merges two adjacent bars into the current bar that retains essential trend information. The result is an AWESOME improvement in Signal Accuracy. [Heikin-Ashi Charts are all I use now.](#) Look at the examples on pages 6-8, and you will see why.

Information at your Fingertips

We've added tabs to our charts for News, Fundamentals, and Research – right in the chart. The News feed features up-to-the-minute news, the Fundamentals tab provides timely information on individual stocks, and the Research tab links to a variety of financial web sites, which bring up information relevant to the charted symbol.

Just click any tab to bring up information for a chart symbol in the same area. You can also use OmniTrader's synchronize feature to display all the information in synchronized charts, as shown on pages 8-9.

Finally, we've added EZ Trade, making it super easy to Buy/Sell right in the chart, without having to use or configure a Trade Plan.

NEW in OmniTrader 2014 - Earnings Dates!

A very important piece of information for stock traders is Earnings Release Dates. It is extremely important to know whether or not there is an Earnings Release within your trading window. Earnings Release dates are displayed on the Chart (with days to release), the Fundamentals tab AND can be added as a column in the Focus List.

Signals from our Servers – FREE!

With the OmniTrader 2014 upgrade, you will be able to instantly access Signals for all your Plug-In Strategies in the Focus List or on the Vote Line!

Your charts will fly because there is practically ZERO analysis for OmniTrader to do. This new resource will help you (a) confirm Signals between Strategies, (b) prospect for trading ideas across Strategies and (c) combine Signals for the best possible view of profit potential in any chart. See Page 14 for a glimpse of it.

There's more to this awesome upgrade! [We've added the ability to load Real Time bars into an End of Day profile.](#) This means you can run Real Time analysis on thousands of symbols, and/or thousands of intraday bars. For Traders and Strategy Developers alike, this is a powerful new advancement.

And, the NEW Ichimoku Cloud Module

The OmniTrader 2014 upgrade package includes the new Ichimoku Cloud Module (ICM). Ichimoku Clouds are being adopted by traders around the world, and for good reason! The clarity of the indicators is amazing. ICM comes with some great new Strategies and a seminar that explains how to use the technique. See page 10.

This is the most full-featured upgrade package we have ever created, with improved charts, relevant trading information, Server Signals, and a new, state of the art trading technique with Ichimoku. Get ready to discover the magic of OmniTrader 2014.

Sincerely,

Ed Downs

OmniTrader 2014

Turning Information into Actionable Knowledge

OmniTrader 2014 is the Best Technical Analysis Opportunity Generator in the world – especially with the many new features added in the upgrade. But before you trade, it can pay handsomely to check additional key information about the market and individual stocks.

When you find a great technical setup in the new version of OmniTrader, you can now easily check the most important additional information that drives prices; News, Fundamentals, Earnings Report Dates and related information. Using tabs to the right of the chart, OmniTrader 2014 puts the most important information about any stock at your fingertips.

Checking the News is Fast and Easy

Are you seeing an unusual move or down-turn? Before you trade a Reversal Signal, you may want to check the News to see if the recent decline is based on important news that could drive the stock lower. In the absence of any reason, we can conclude that the pull-back is a normal market event and therefore the stock is likely to rebound. Checking the News before trading is a very smart habit to get into.

Key Fundamentals at your Fingertips

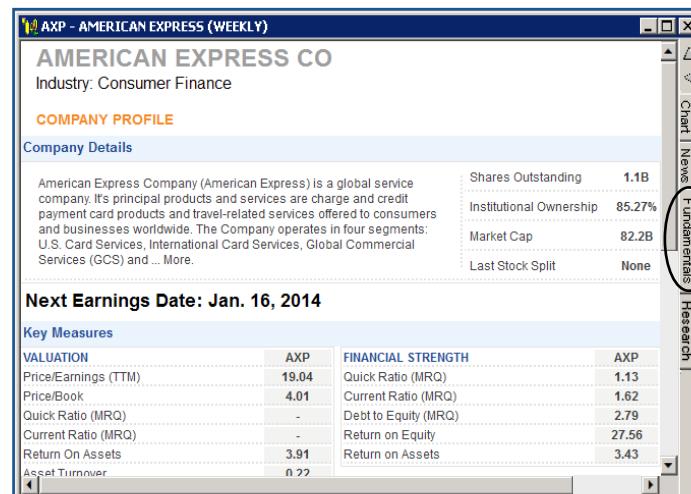

The new Fundamentals tab in OmniTrader 2014's charts display key fundamental information. Just click the Fundamentals tab and the most widely used measurements are all there.

Heikin-Ashi Chart (see page 6)

News Feed web page pops-up when links are clicked.

Fundamentals tab shows information on the financial health of a company.

The Most Informed Trader Wins the Game

NOW - Earnings Release Dates in OT!

Earnings Reports are key drivers of stock price movement. It's important to check for earnings before placing a trade. Here are just some stocks that recently experienced dramatic moves as a result of earnings reports:

Strategy	Earnings Date	Move
ESI	10/24/2013	16%
APOL	10/22/2013	28%
GOOG	10/17/2013	14%
AMZN	10/24/2013	11%
AEM	10/23/2013	18%

In OmniTrader 2014, you can see the next Earnings Release Date in the Focus List and in the Charts. Never miss another Earnings date.

Pending Earnings are marked in the charts with a "\$" Symbol.

OmniTrader 2014 shows a "\$" in the chart ahead of earnings, with number of days to the report (+3 days in this example for Google). On October 17, Google outperformed analyst estimates, gaining 14% in one session.

Plus, a Convenient Research Tab

The Research tab brings up web pages from financial sites that are based on the symbol loaded into the chart. This saves time and facilitates in-depth research ahead of the trade.

EZ Trade in Charts

Once you have checked important pieces of information related to your trade, you can Buy or Sell using the new EZ Trade feature we've added to the top and side of each chart. This new feature is similar to many brokerage programs and makes trading the charted symbol quick and easy. There is no need to use Trade Plans (but they can still be used in the traditional way, with the Chevron).

Heikin-Ashi Charts

What is a 'Heikin-Ashi' Chart?

Heikin-Ashi Candlesticks are essentially Japanese candlesticks that have been adjusted or "smoothed" to filter out minor counter-trend moves.

The Japanese word Heikin means "average" and Aashi means "bar". These "average-bar" charts easily identify trending periods, potential reversal points and classic technical analysis patterns.

Heikin-Ashi Candlesticks use the Open and Close from the prior bar and the Open, High, Low, Close from the current period to create a bar that represents a combination of the current and prior price bars, with one HA bar formed for each Candle bar.

Much Easier AND More Profitable to Trade

To the right are both a Heikin-Ashi chart and a candle chart for DIA (Dow Industrials SPDR) using the same Strategies. The false Signals generated in September and October in the Candle Chart were filtered out by the Heikin-Ashi chart.

Heikin-Ashi is also valuable for spotting a potential change in trend. When bars change from red to green or vice versa, we know a trend change is likely.

Compare the charts and signals.
Which would you rather trade from?

A Better Candle Chart

Candle Chart for DIA from May through October 2013. Many gaps form in the charts from day to day, and false Signals are often caused by "chart noise".

Heikin-Ashi chart for DIA over the same period. The difference in trend clarity is astonishing. The primary trend reversal points were easily identified.

Improve every aspect of your analysis!

As we built the OmniTrader 2014 upgrade, I was so impressed with the improved Signals and trend-following qualities of Heikin-Ashi, I decided to use them exclusively for my trading.

'I'm sold on Heikin-Ashi!' - Ed Downs

I still plot the Candle Charts to see actual prices, but all my analysis for Signals and Chart Patterns is now based on Heikin-Ashi charts. The improvement in all aspects of technical analysis with these charts is amazing.

The Real Time Advantage

Perhaps the biggest opportunity to benefit from Heikin-Ashi charts is in Real Time trading. We all know that Real Time charts can be "choppy" because of the minor swings that can happen during the session.

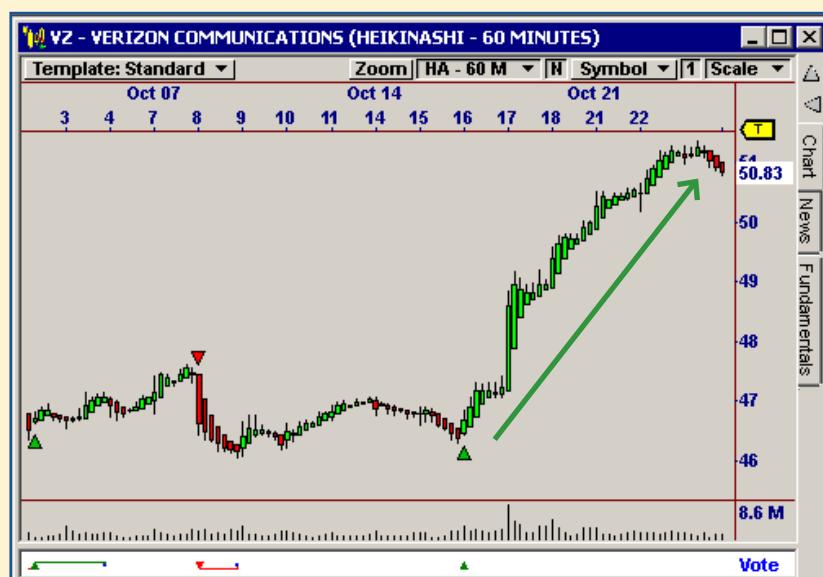

Take a look at the example shown to the right for 60 minute charts on Verizon. Similar to our End of Day example on the previous page, the Candle Chart has many false Signals, but the Heikin-Ashi Chart captured the trend that started October 16 flawlessly!

The trend changes are clearer, the indicators work better, and the Signals are MUCH better. Using Heikin-Ashi in actual Real Time conditions will put a smile on your face, as you more easily identify the start of new trends.

Heikin-Ashi in Real Time

This 60 Minute Candle Chart for Verizon has several false Reversal Signals, caused by minor fluctuations in the chart.

The 60 Minute Heikin-Ashi chart generates better Signals. Note how the period from October 16 through October 23 had only green bars. The ICM Trailing Stop, developed by Jeff Drake, takes advantage of this behavior (see page 13).

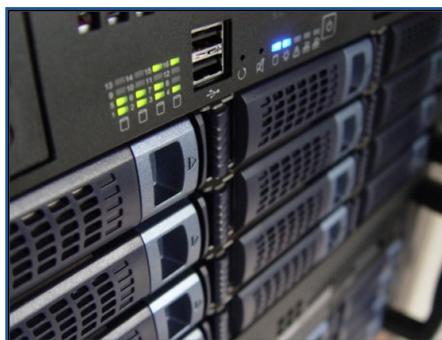

You can apply all indicators and Strategies to Heikin-Ashi charts in precisely the same way you would to regular candle charts.

OmniTrader 2014

Better Charts

Better Information

What Makes
OmniTrader 2014 our
BEST Upgrade Ever?

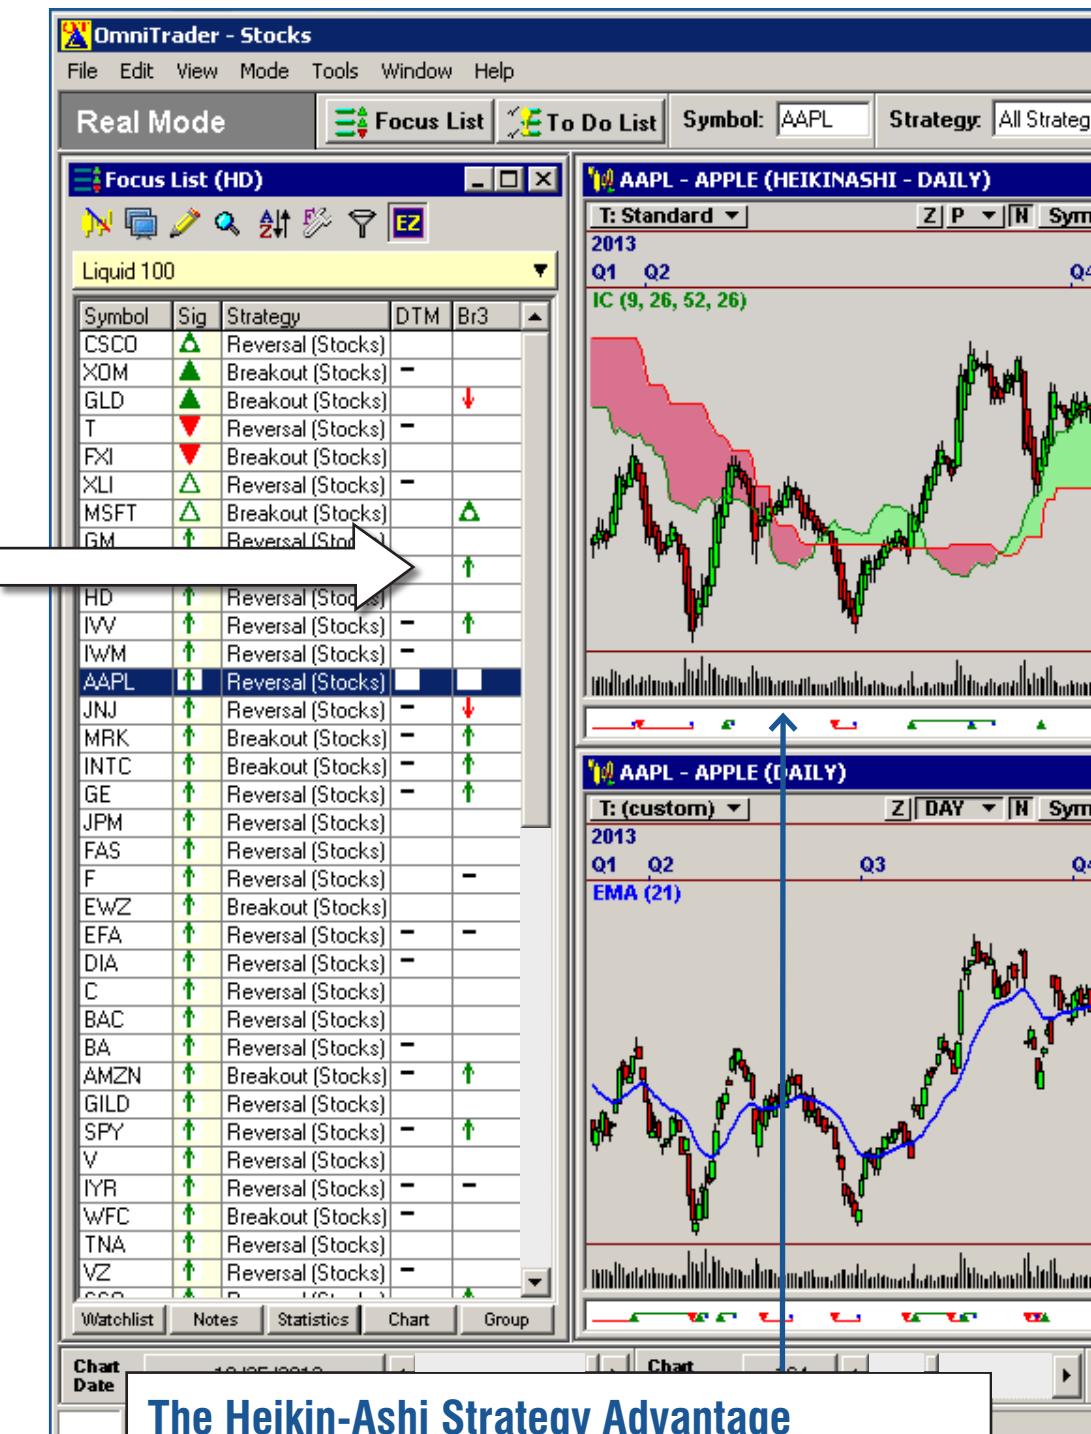

Signals from our Servers

Now, you can get Signals for all your Plug-Ins directly from our Servers – within minutes of Market Close each day. Each day, we run ALL our Plug-In Strategies on the entire market of stocks and ETFs and provide both historical and right-edge Signals directly into your OmniTrader.

Review all the Signals generated quickly and easily, or add columns to your Focus List so you can confirm across Strategies. AND, your OmniTrader will literally FLY because it doesn't have to run any analysis.

SPECIAL OFFER:
Preview ALL our Plug-In Signals. See page 14 for details.

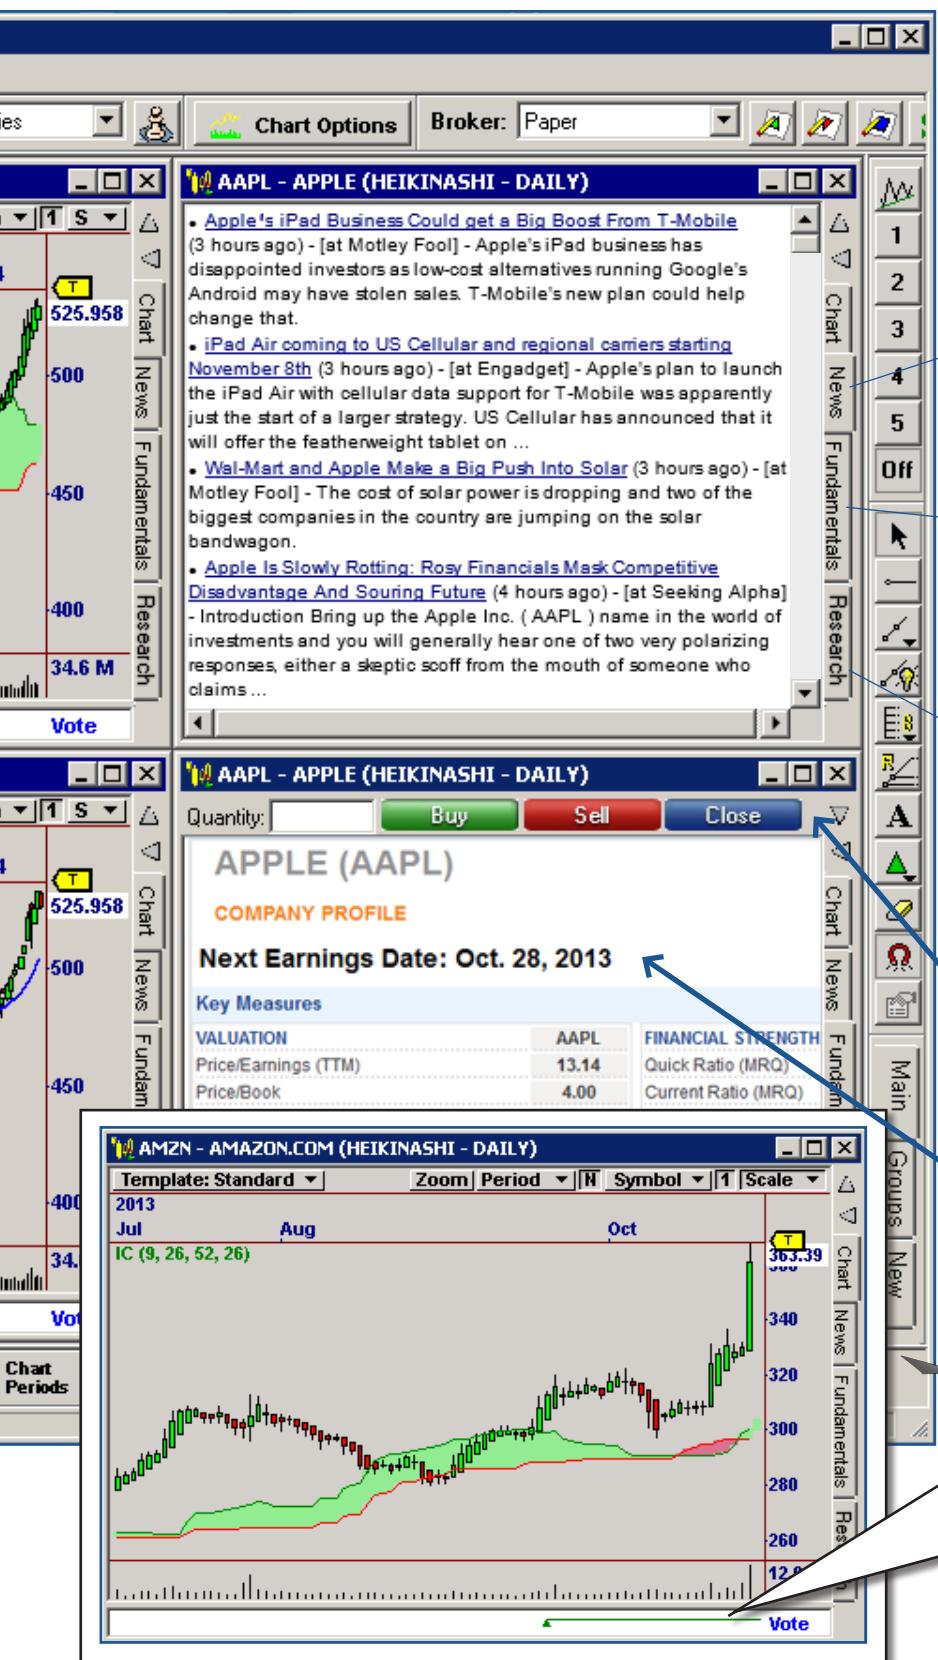

The Heikin-Ashi Strategy Advantage

Heikin-Ashi Daily chart is plotted above the Daily chart using the same Strategies. It's easy to see how much better the Signals are in the Heikin-Ashi chart. This chart type provides a significant advantage in OmniTrader's analysis.

Better Analysis

Better TRADES!

New! Chart Tabs

This page shows the new chart tabs in OmniTrader 2014. Using our synchronized charts feature: all charts populate with information from any symbol that is selected in the Focus List (AAPL in this case).

News Tab

Our News Feed shows you all the recent news for the symbol currently charted. News automatically updates to keep you ahead of the game.

Fundamentals Tab

The Fundamentals Tab shows you a compendium of fundamental information, letting you quickly analyze a company's financial health, and balance sheet.

Research Tab

With the Research Tab, you can enhance your understanding of the underlying company with links to external analyses on the current symbol from a variety of financial web sites.

EZ Trade

The new EZ Trade feature is the easiest and most convenient way to enter orders for the given symbol.

Earnings Release Dates

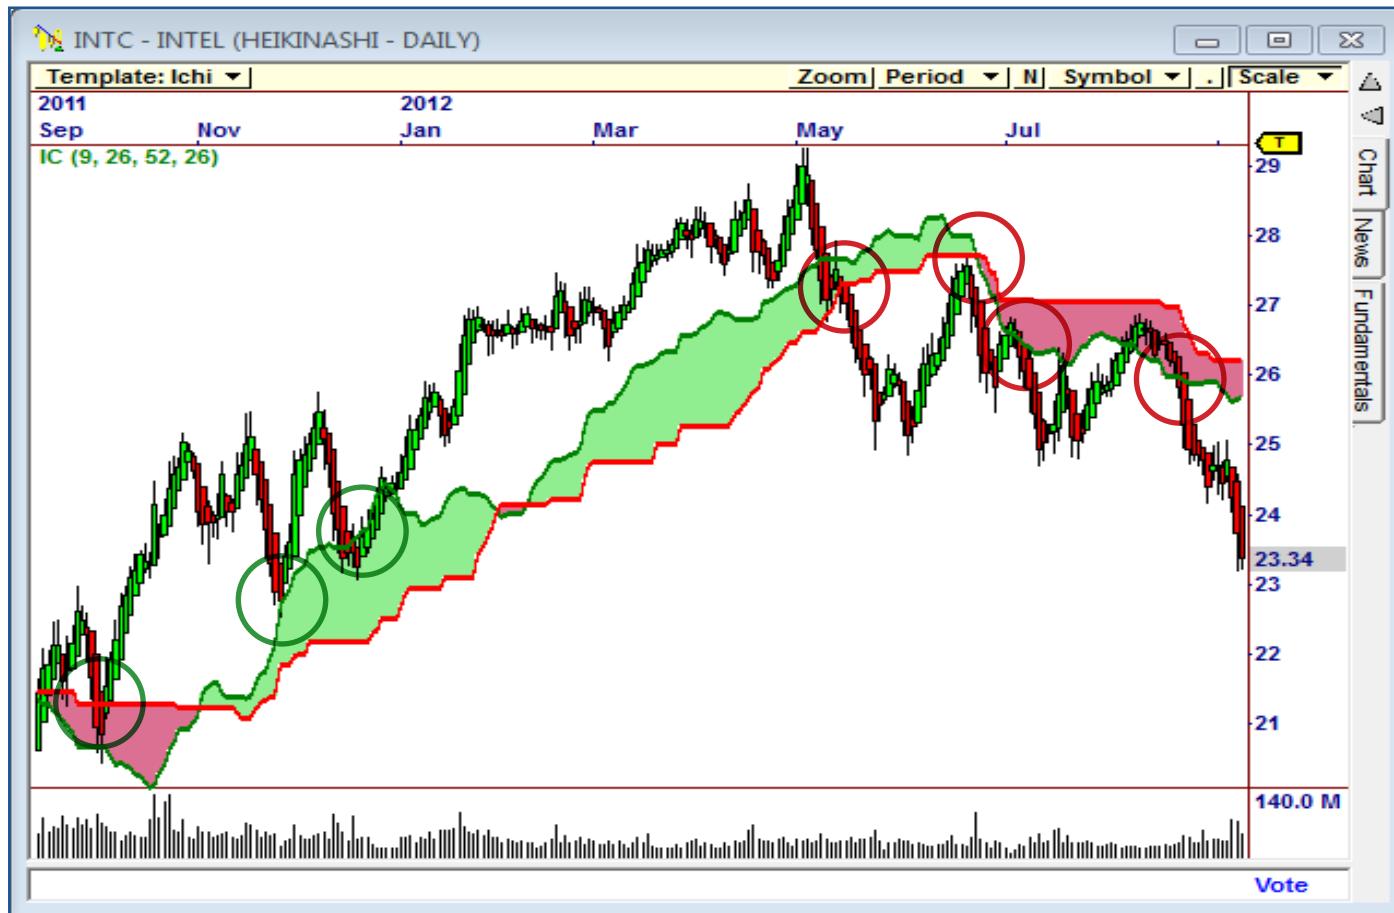

OmniTrader 2014 keeps you ahead of the curve, by ensuring you always know when the next earnings release will be. This data is available in both the charts and as a column in the Focus List.

Ichimoku Cloud Module

Get Fabulous Trend-Following Signals and easy chart confirmation with ICM!

NEW!

The Ichimoku Cloud Module

The Ichimoku Cloud Module reveals hidden Support and Resistance levels. As price touches or penetrates the Cloud, entry points are easy to see, as shown in this chart for Intel.

Introducing the Ichimoku Cloud Module

The OmniTrader 2014 package includes a new Module that has the promise to forever change the way traders view their charts.

Ichimoku (also known as Ichimoku Kinko Hyo) translates to “one glance equilibrium charts”. A “cloud” is formed as a shaded area between the Support and Resistance lines of the Ichimoku indicators.

These indicators make it very easy to see trend direction and strength, future support and resistance levels, and even price momentum.

Ichimoku Clouds provide a wealth of visual information and have helped traders make profitable trading decisions for decades.

Recently, the Ichimoku Cloud has gained popularity across the globe. Traders are using these tools to trade not only stocks, but commodities, options and forex as well.

With the Ichimoku Cloud Module (ICM), Nirvana Systems has taken these tools and molded them into a powerful new trading package.

Trading with Ichimoku

The Ichimoku approach takes recent price data and plots two main indicators (Leading Span A and Leading Span B) to create a “cloud”. The cloud is then shifted to the right.

Hidden Support and Resistance Revealed!

The visual nature of the cloud can tell us many things. If price is on either side of the cloud, we can instantly see what kind of trend we are in. The thickness of the cloud tells us trend strength. As price approaches the cloud, we will often see the cloud provide support or resistance.

Already you can see that the Ichimoku Cloud provides you with valuable information AND that it is easy to engage.

Additional indicators are included in the Ichimoku Cloud Module to provide even more information. These tools have been used to create three powerful Trading Strategies that present you with great trading candidates right out of the box.

Using Ichimoku Clouds with Heikin-Ashi Charts

Most traders that use Ichimoku Clouds will apply them to Heikin-Ashi charts. The smoothness of the Heikin-Ashi chart coupled with the high impact visual nature of Ichimoku Clouds is a powerful combination.

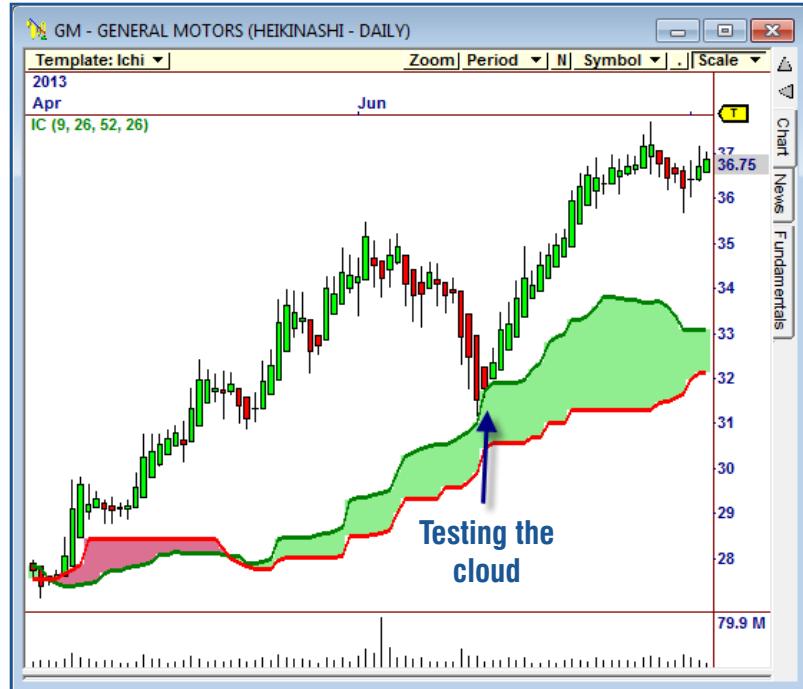

The ICM Trading Strategies on the next page are configured to be used with Heikin-Ashi charts, which are included in OmniTrader 2014.

The two examples to the right show how Heikin-Ashi and Ichimoku Clouds make it easy to identify profitable trading opportunities.

The first example on GM shows a “bounce” off the Cloud. We watch for Heikin-Ashi bars to reach the Cloud and bounce off it, providing a good entry point.

The second chart for GNW shows a break through the top of the Cloud. These “breakout” situations are often very profitable, and are extremely easy to identify when the Cloud Indicator is displayed on the chart.

Ichimoku with Heikin-Ashi Charts

The example above shows the previously strong GM steadily falling in early June. When the Heikin-Ashi chart tests the cloud we spot an excellent entry into the trend.

In August GNW was trading inside the Ichimoku Cloud. The Heikin-Ashi chart shows a clear break from the Cloud late in the month, allowing us to take advantage of a strong breakout opportunity.

New Ichimoku Cloud Strategies

Very Accurate Breakout and Reversal Signals!

The Ichimoku Cloud Module includes three mechanical strategies that were developed to provide you with the most popular Ichimoku Cloud trading setups.

Cloud Bounce Strategy

The ICM Cloud Bounce Strategy looks for price to test the outer boundaries of the Ichimoku Cloud. Since the Cloud often offers support or resistance, this setup provides excellent trend trading opportunities.

Cloud Breakout Strategy

The second strategy is the ICM Cloud Breakout Strategy. This strategy looks for price to push through the top of the Cloud while analyzing the Ichimoku indicators for confirming factors.

Red Cloud Reversal Strategy

The ICM Red Cloud Reversal Strategy will fire long when the cloud is red and price tests the top of the cloud. When this occurs we usually see strong support which leads to good reversal trades.

The Cloud Bounce Strategy finds great trend trades as price reacts to a test of the Ichimoku Cloud.

The Cloud Breakout Strategy generates signals that are often followed by explosive moves and exceptional results. The ICM Stop was created specifically for these Strategies (see next page).

The ICM Trailing Stop

The Ichimoku Cloud Module includes a stop that was specifically designed to be used with Heikin-Ashi charts. The ICM Trailing Stop takes advantage of the smoothness that is inherent in a Heikin-Ashi chart by only updating once a bar prints against the trade.

The charts on page 12 show the ICM stop in action. You will note that the original level of the stop doesn't change as long the bars advance in the same direction. When an opposite bar prints, the stop will update to the low of that bar with a cushion.

The ICM Trailing Stop does an excellent job of allowing a trade to maximize its gains without exiting too soon. All three of the ICM Trading Strategies use the ICM Trailing Stop.

Mastering the Ichimoku Cloud Seminar with Jeff Drake

The Ichimoku Cloud Module is easy to apply. However, we want to make sure our users take full advantage of the valuable tools provided, so we are including a new seminar titled, *Mastering the Ichimoku Cloud* by Jeff Drake. In the seminar, Jeff explains the concept behind Ichimoku Clouds. He then shows specifically how to use the ICM tools to enhance your trading.

In this seminar you will learn:

- The Concept behind the Ichimoku Cloud Module
- How to determine previously hidden Support and Resistance
- How to recognize the best Ichimoku Trading Setups
- Combining Ichi Clouds and Heikin-Ashi charts
- Which Ichimoku Strategies to use based on your Trading Style
- The Profit Power of the ICM Trailing Stop

Also NEW in OmniTrader 2014:

Real Time Bars in EOD Profiles!

Real Time Profiles in OmniTrader are limited to less than five hundred symbols.

Now, you can add intraday periodicities to END OF DAY Profiles. This means you can load thousands of bars of Real Time data, for hundreds of Symbols.

This is very important for those working on Real Time Strategies (including us)! But there is another benefit -- now, you can run unlimited symbols on Real Time bars to get Trading Signals before the start of the session. Talk about a Power Prospecting Tool!

This chart for AAPL has 5,000 60-minute bars loaded.

NOW – Get All your Strategy Signals INSTANTLY.

Announcing Signals From our Servers

We are preparing to launch a new service that will provide Signals for all our Plug-ins, including WaveTrader, iTLB, Divergence, Hurst, etc. to our OmniTrader 2014 users.

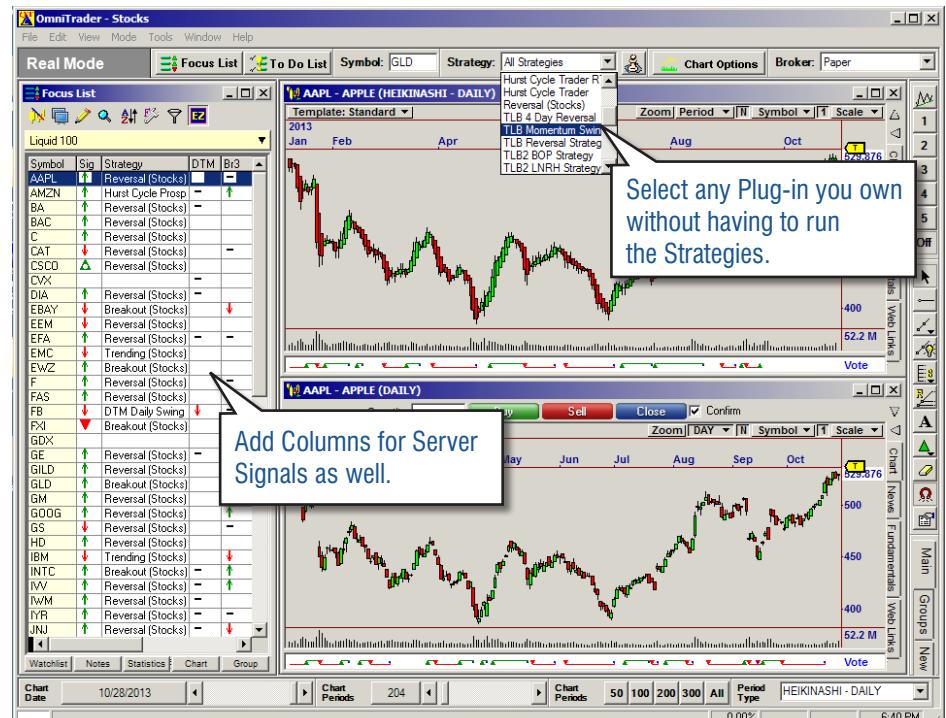

Using fast new servers, we are generating every Signal for every Plug-In Strategy, for nearly every stock and ETF in the market, over 10+ years of data. These Signals will be available in OmniTrader 2014.

How do you use Server Signals in OmniTrader?

This new feature will enable you to prospect for great trading ideas faster than ever before. You can instantly browse all the Signals from all your Plug-Ins, because OmniTrader doesn't have to run any analysis. And, your charts will fly, too.

You can also add Signal columns as you like to your Focus List to “confirm” Signals from your customized Strategies. With your upgrade purchase, you gain 100% FREE Access to Signals from any Plug-In you currently own.

Instant Signals from Any Plug-In Strategy

Server Signals can be selected from the Strategy drop-down OR add Server Signal columns to your Focus List.

SPECIAL BONUS: Get Any Plug-In FREE with the Special Package!

When you purchase the OmniTrader 2014 Upgrade Package, you will have access to the signals from ALL of our Plug-ins through January 31st. This allows you to evaluate the type of signals generated by each strategy and see which ones will help the most with your trading.

Once you have explored our server signal library, select your favorite Plug-in FREE of charge! Get the OT 2014 Upgrade Package and instantly expand your trading horizons.
